Quad Search Playback

Quad Playback

Figure 1: Quad Playback Interface

- Select a viewing window by clicking on the header, it will turn yellow when selected.
- Assign a file to that window by opening the search dialog. Click the Search button or double click on the window header to open the search screen.
- Select to search either local or remote files and use the drop down menus to narrow the search by camera and date.
- Double click on the file to open it.

Choose either **PAL** or **NTSC** resolution, depending on your recordings.

Switch between **Single** and **Four Screen** play back.

DSR 3.0

Quad Search Playback

Use the **Play**, **Pause** and **Stop** control on the bottom to control all Windows. The play back controls on the right hand side can be used to control video in a single window.

Click the **Utility** button to select what information is displayed for each file, see the file properties or select JPEG or Bitmap format for snapshots.

Use the **Speed** slider on the right had side to select the playback speed.

Use the **Position** slider to jump to any portion of the current video file.

When a video is paused, a snapshot of the current frame can be taken.

- Click  to switch between snapshot and normal video mode
- Click  and  to enlarge or shrink the snapshot.
- Click  to print a copy of the snap shot.
- Click  to save the snapshot. A browser dialog will appear to set the save location.
- Click  to add a header, footer or comments to the snap shot print out.

Always on top - Toggle this button to keep the Playback window on top of all other open windows. The default position, shown here, is enabled.

Auto Start - down means files automatically start playing when loaded.

Continuous - down means that play back will continue playing the next file in the list after the current one finishes. When this button is up, playback will stop at the end of the current file.
